## Instructions for sending/receiving of documents over OBC Genius 2

Sending/receiving of documents is enabled with version mobileNET 10.48

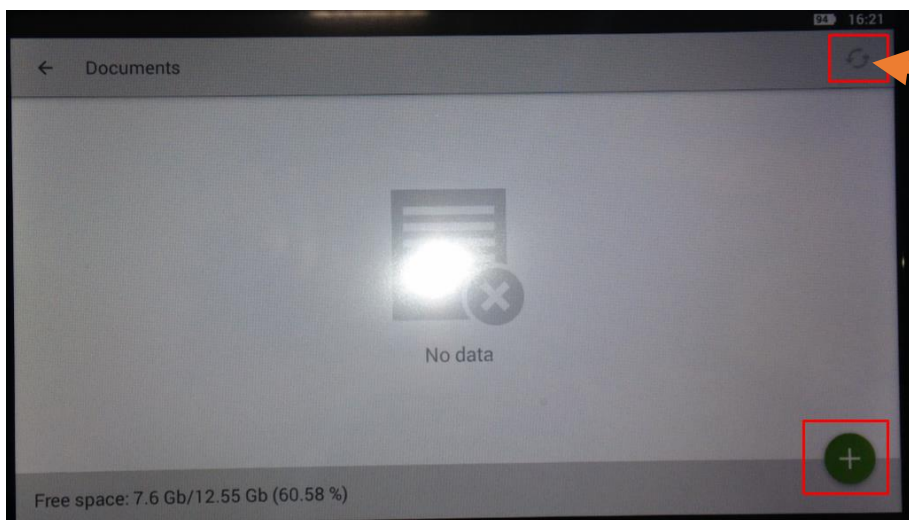

Short instructions:

On main mobileNET menu we have icon for document . With press on selected icon the menu for taking photograph opens (picture2)

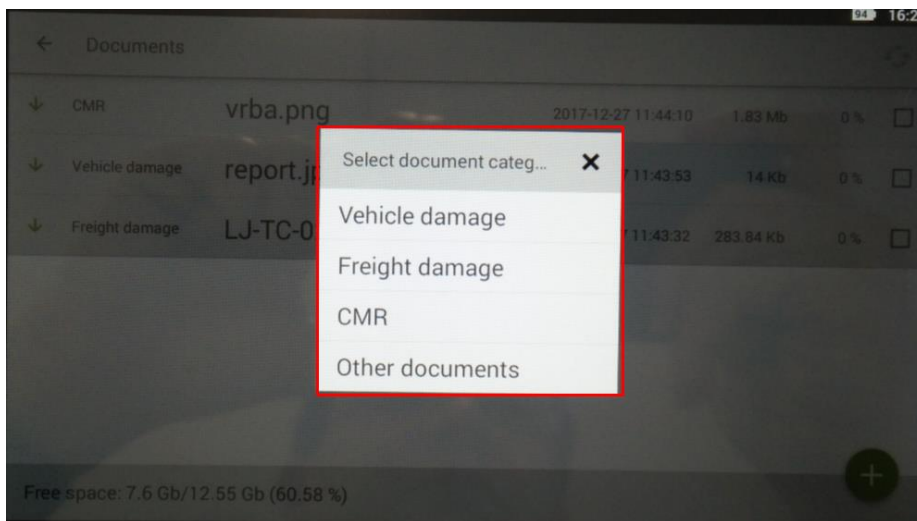

Before first use the user must press button refresh () to download code register for document scanning. Icon is also for check if there are also any new documents available for download on to tablet computer OBC GENIUS 2.

If the user wishes to send (take a picture) of document he presses plus icon () lower right corner.

Picture2

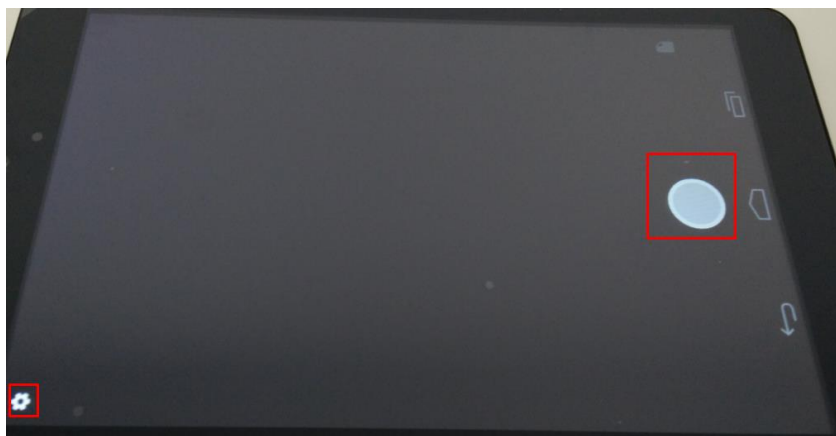

New dialog opens with code register(picture3), where we select type of document. With the press on the type of document camera opens(picture4)

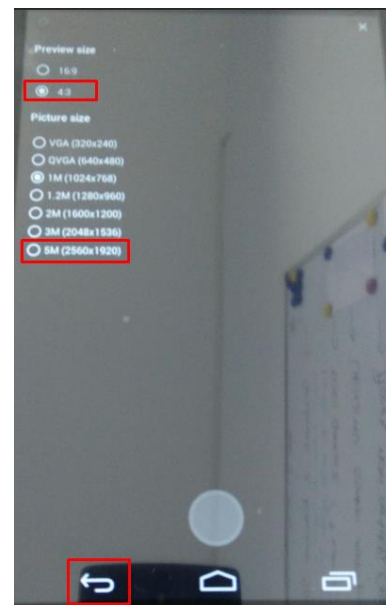

Picture3

Scanning of documents, user presses on white dot, and takes a picture(picture5). If user wishes to change quality of picture he presses on icon of cog(🔧)

Change of picture quality: User presses on format he can choose between 16:9 or 4:3, when user selects format the option for quality appears. Default quality is 1M(1024x768) To confirm quality user selects option back ↩

Picture4

When user takes picture several options appear to confirm(☑), reject(✕), retry(↻)(picture5)

Picture5

When user presses confirm(☑) the application returns to basic menu for scanning/receiving (picture6)

Explanation of icons:

Blue arrow facing up means, that those are files, which user **took** over OBC Genius 2 and they will be transferred to server

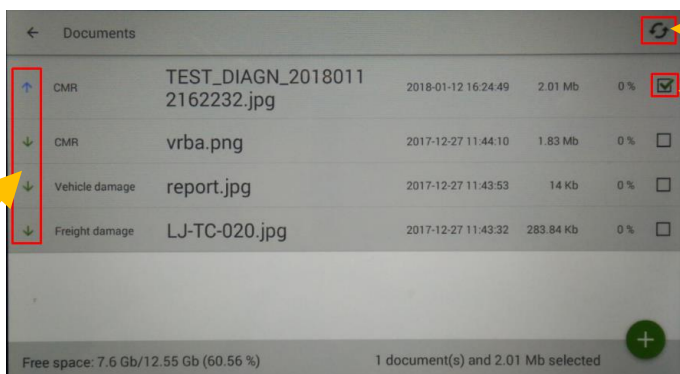

Green arrow facing down means, that those are files, from **the office** to the OBC Genius 2

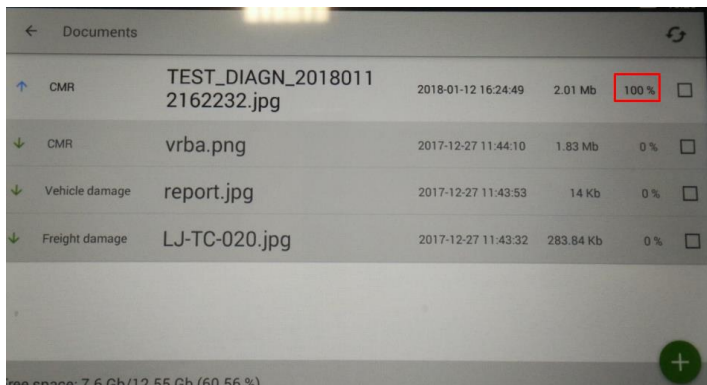

Icon refresh starts procedure for sending/receiving files from tablet on server in case if we have selected file with checkbox ☑

In case, if we wish to send/receive document, user must press checkbox ☑ on right side, when file is selected user presses refresh ↻

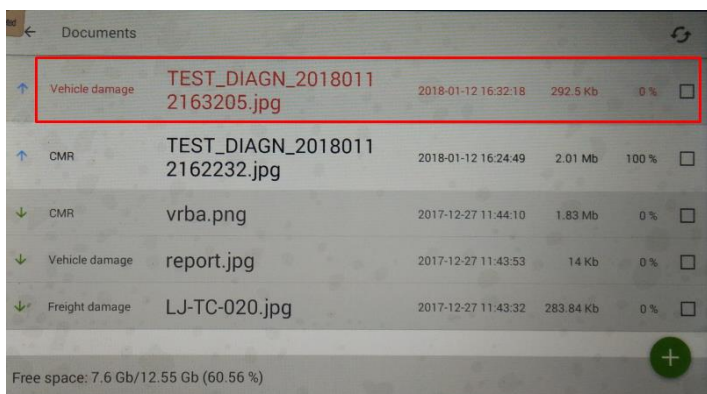

Picture6

If file is successfully transferred we have indication 100%(picture7)

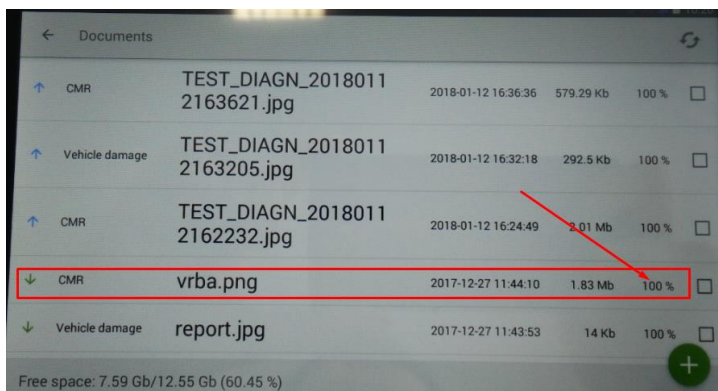

Picture7

If transfer is not successful the text is red, user selects checkbox  and then refresh

Picture8

Check of received documents: User opens received document with press on line, it's important that file is transferred indication 100%(picture9) to close the document user presses
